Question 1

Develop a table for a logical framework for the “Working for Water” social development project around the following headings:

- Inputs
- Activities
- Indicators
- Outputs
- Outcomes

Identify the process indicators and the outcome indicators from this logic table that will be used in an evaluation plan.

Question 2

Write a narrative proposal for a monitoring framework for the “Working for Water” social development project. Your design should include a discussion of the following questions/issues and an illustration using the case study:

- What are the goals of the programme? (Who are the targets? What is being delivered?)
- What are the purposes of monitoring the programme? What are the goals and objectives of monitoring?
- How would you measure coverage? What are some of the possible problems related to coverage or biases in coverage?
- What will be monitored? What are the indicators you will gather information on? What monitoring questions would be asked in monitoring the programme?
- What monitoring tools/instruments will be used to gather and record the indicators?
- What will be the sources of data for your indicators?
- Who will collect the monitoring data?
- How will the monitoring data be analysed? What do you look for in the data when you analyse the data?
- Who will the findings be reported to?
- How will it be used?
Question 3

Present an evaluation plan to conduct an outcomes evaluation for the “Working for Water” social development project. Your plan should discuss and illustrate the following issues:

- Goals or aims and objectives of the programme
- Purposes of the outcomes evaluation
- Aims and objectives of the outcomes evaluation
- What would be the gross effects of the programme?
- What would be the net effects of the programme?
- What would be the most appropriate outcome evaluation design for this programme?
- What indicators would be used to measure the outcomes of the programme? What questions will you be looking for answers to?
- What research tools and instrument will be used to gather and record the indicators?
- What will be the sources of data for your indicators?
- What would be some of the extraneous confounding factors on the net effects of the impact of the programme?
- What would be the possible design effects on the net effects of the programme?
- What design strategies will be used to isolate the effects of extraneous factors?
- How will you analyse the data?
- Who will the findings be reported to?
- How will it be used?

```
End```
